SUMMARY

Full-stack web developer with 1+ year of production experience building and operating enterprise monitoring and workflow-automation systems. Experienced with Node.js, React, JavaScript, Python, PHP, REST APIs, SQL, authentication, RBAC, data validation, performance optimization, Git, CI/CD, and production debugging. Reduced key reporting-page load times by up to 40%, resolved a production SQL defect affecting 220 records, and automated more than 10 hours of weekly operations work. Strong interest in reliable web services, real-world automation, clean testing practices, and maintainable enterprise software.

EXPERIENCE

Innovascope LLP

Hubli, India

Full-Stack Developer

Jun 2025 – Present

- Built and shipped a real-time industrial monitoring platform used by enterprise clients to view machine status, telemetry, and alerts through a unified web dashboard.
- Developed and maintained backend services and REST APIs for monitoring, reporting, workflow automation, authentication, and client-specific business processes.
- Integrated ESP32/Arduino device signals with application data workflows, enabling telemetry capture for industrial monitoring use cases.
- Investigated and resolved a production SQL defect that generated 220 incorrect machine-data records; isolated the faulty query, deployed the fix, and reconciled all affected records.
- Refactored N+1 query patterns using eager loading and batched SQL joins, reducing page-load times by up to 40% across key reporting screens.
- Implemented authentication and authorization across 5+ roles using bcrypt password hashing, RBAC, CSRF protection, prepared statements, and secure session management.
- Built bulk-import and batch-deduplication tools that eliminated approximately 10+ hours of manual operations work per week.
- Supported Git-based development, CI/CD pipeline runs, IIS/Windows Server deployments, release management, production troubleshooting, root-cause analysis, and client issue resolution.

PROJECTS

FlowForm – Configurable Workflow Automation Platform | PHP, JavaScript, React, Node.js, MySQL, REST APIs, RBAC Live Demo

- Built and deployed a Jotform-style platform where administrators define forms, assign users to sequential workflow stages, map fields to workflow owners, and track submissions through completion.
- Designed service logic and relational data structures for forms, fields, workflow sequences, user assignments, submissions, draft/live/completed states, and role-based access.
- Implemented required-field validation, authentication, RBAC, CSRF protection, prepared SQL statements, form duplication, employee management, and submission-history views.
- Integrated a DeepSeek-powered assistant that generates editable form structures from natural-language descriptions, with validation and manual review before publication.

SpendSense – Android Budgeting Application | Kotlin, Jetpack Compose, Room, MVVM

May 2026

- Built an Android budgeting application with SMS-based transaction detection, local Room persistence, and an interactive Jetpack Compose dashboard for spending insights.
- Implemented an offline-first data flow using MVVM architecture and locally persisted transaction records.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, PHP, SQL, Kotlin, HTML, CSS

Web and Backend: Node.js, REST APIs, MVC, OOP, React.js, responsive UI, API validation, authentication, RBAC

Databases: MySQL, SQLite/Room, relational schema design, joins, indexing, query optimization, batch processing

Testing and Quality: Unit testing, integration testing, Git, pull requests, code reviews, SDLC, Agile/Scrum

Operations and Security: CI/CD, IIS, Windows Server, release management, incident response, RCA, bcrypt, CSRF protection, prepared statements, secure sessions

Integrations: Third-party APIs, DeepSeek API, ESP32/Arduino telemetry, device-to-database integration

EDUCATION

Jain College of Engineering and Technology

Hubli, India

B.E. in Computer Science and Engineering – CGPA: 8.44/10

Dec 2021 – May 2025

CERTIFICATIONS

Google IT Automation with Python – Python for OS Interaction; Google IT Automation with Python – Git and GitHub
